

Cross Match Technologies Inc. is a leading global provider of high-quality biometric identity applications and solutions.

The company's solutions consist of a range of products, such as fingerprint and palm scan devices; document readers and access control systems; proprietary enterprise and application software; and services, including background checks. Cross Match's government and commercial customers use its biometrics solutions to capture and process the unique physiological characteristics of individuals to establish and verify their identity. These solutions, which are known within the biometrics industry for quality, reliability and ease-of-use, enable Cross Match's customers to protect and secure people, property and privacy.

Cross Match's primary offerings include innovative and interoperable fingerprint, palm print, full-hand print and multi-biometric capture systems. The interoperable capability of these products and customizable software allow the company to integrate its solutions within a customer's existing infrastructure. Cross Match's customers use the company's systems to conduct criminal bookings, perform background checks for job applicants, verify identities at borders and other checkpoints, register citizens for driver's license and national identification programs, prevent identity fraud in large-scale government and civil identification programs, and control access to office buildings, government facilities and other secure areas.

Cross Match continues to develop innovative biometric applications and technologies to enhance and expand its existing solutions, and better address its customers' needs. The company's focus on innovation has resulted in more than 40 patents granted and 165 patents pending.
