

**AS THE WORLD LEADER in secure chipcard ICs, Infineon knows all about mastering the security and performance challenge.**

**Infineon's Chip Card & Security ICs business unit develops, manufactures and markets innovative semiconductors and system solutions for use in a broad spectrum of smart card and security applications. Infineon is contributing its decades of security expertise to the effort to increase the security of today's solutions in communications, access protection for data and networks, digital home entertainment electronics, payment and identification applications. Based on many years of experience in the contactless industry and government-driven identification field, Infineon is offering ranges from memory ICs for access & transport applications and products for high-speed tagging to state-of-the-art contactless security controllers for e-passports.**
