

## **Conformance Testing of ePassports**

secunet provides methods and services to test the data interoperability and conformance of electronic passports and other identification documents.

## **Biometrics**

secunet provides consultancy and evaluation services regarding biometric methods and algorithms.

## **ICAO-Library**

secunet's ICAO-Library provides for methods to access data on RFID Passports for software developers. The library adopts new standards and implementation methods to allow easy access to the most recent documents.

## **BioMiddle**

secunet BioMiddle, a standard-orientated biometric middleware, facilitates the modular use of different biometric system components, thereby creating reliable interfaces and promoting the exchange of individual components in the highly dynamic biometric technology market. This means investment security and straightforward development as well as optimum combination and configuration possibilities, making biometric applications easier to master for government authorities and companies alike.
